

MINI POWERZONE®

➤ The powerful, portable odour removal system

Product specification

Dimensions 52.5cm x 13cm x 10cm

Weight 2.7kg

Power cable 4m

Operation Mains operated

Voltage 220-240V/110V

Power 69W

Features Programmable timer with easy push button controls
Audible status alarm
Runtime clock display

The **MINI POWERZONE** offers a portable, highly effective, environmentally friendly solution that tackles and removes the cause of malodours rather than just masking them, making it the ideal solution for quickly and easily deodorising hotel rooms, vehicles, holiday lets and residential home rooms.

Advanced technology

The **MINI POWERZONE** utilises advanced technology to create a powerful odour removal system. Air is drawn into the units air purification chamber, where it is exposed to intense levels of germicidal, UV light that destroys micro-organisms.

The powerful wavelengths contained in the UV light react with the air to produce a purifying plasma that contains reactive oxygen species such as tri-atomic oxygen, hydroxyl radicals and ozone, which destroy bacteria, viruses, fungi, yeast, mould, algae, and other harmful micro-organisms as well as all unpleasant odours.

Key features:

Saves time and costs by eliminating odours at source

Destroys odour causing bacteria, preventing smells returning

Eliminates all odours including from smoke or chemicals

Automated and chemical free, it works quickly and effectively and leaves no residue

Lightweight, portable solution enables it to be used where and when it's needed

Minimal maintenance – requires simple UV lamp replacement after 9,000 hours of use

Minimal running costs - less than 10p per use**

** Includes cost of purchase and electricity running costs

Aircare services

Ease of use

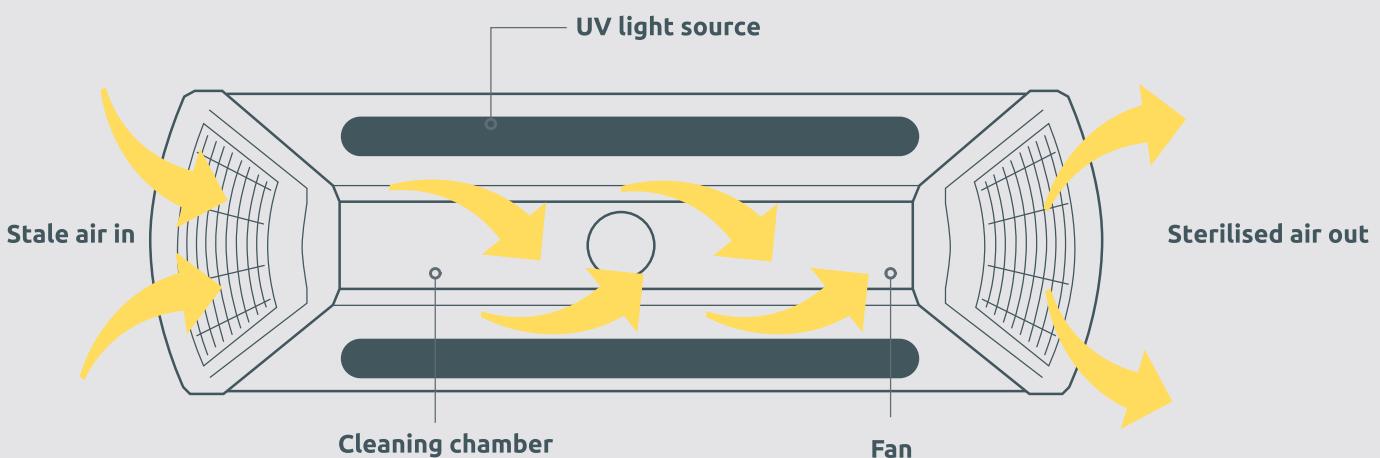

The **MINI POWERZONE** is designed to be used in unoccupied spaces, and features a programmable timer which allows the user to set the treatment time in increments of 10 minutes (an average sized hotel room requires a treatment time of approximately 30 minutes). Simple and easy to use, once the unit is set it requires no additional user intervention.

The unit should be placed in the odour affected room, on a non-metallic surface, ideally as high in the room as possible with the air conditioning turned off. The timer should be set and the unit started, the room should then be vacated and the door closed with no access available during the treatment time. 20 minutes after the treatment time has ended, the room may be entered and used. To ensure the unit is not misused by unauthorised users, the unit also features a security mode setting.

Minimal maintenance

The UV lamp is designed to last for 9,000 hours of use, and the unit features a digital display counter to show the number of hours of operation as well as on/off cycles it has been used for and a lamp replacement indicator.

As the **MINI POWERZONE** is portable, care should be taken whilst it is being transported and positioned.
