

AIROMATIC

➤ Keep your washrooms and workplace smelling fresh and fragrant

Designed to distribute fragrance in larger spaces, the **AIROMATIC** utilises heat technology to create smaller scent particles for longer lasting freshness.

Fragrance large spaces

Traditionally larger spaces can be difficult to fragrance, however the **AIROMATIC** provides a highly effective fragrancing solution ideal for larger spaces up to 1000m³.

The fragrance is delivered via gentle heating of a gel cartridge, which delivers a continuous source of fragrance 24 hours a day. With three programmable fragrance intensity settings, the **AIROMATIC** can be tailored to suit the area. The mains operated unit creates very small particles of essential oil fragrance which are then distributed into the wider area via an internal fan.

With a choice of five fragrances, these light yet powerful scents are designed to invoke a sense of freshness and cleanliness and are ideal for use in both in and out of washroom environments.

Remove malodours

The **AIROMATIC** fragrances incorporate Odouraze™, which is an odour neutraliser. This uses unique malodour control technology and features active ingredients that interact with malodour molecules to destroy bad smells, rather than masking them.

Available in

Nickel
Collection

Key features:

- Effectively fragrances spaces of up to 1000m³
- Programmable with 3 settings to ensure a controlled and effective fragrance distribution
- Contains Odouraze™ odour neutraliser to combat malodours
