FRAGRANCES

Installation

It is recommended that the unit be installed well above head height (above 2.1m) to avoid the aerosolised fragrance coming into contact with passers-by and to reduce the risk of vandalism.

Remove malodours

The **AIRSCENT XTRA** uses AROMAGUARD malodour counteractant technology, to neutralise and eliminate unwanted odours.

Specifications

Fragrance dispersal	Every 10, 20, or 30 minutes
Coverage	up to 170 m ³

Improved sustainability

The cans for our air freshener fragrances have been made smaller to reduce Alcohol, propellants & VOC's by over 60%. This in turn has reduced our packaging and the number of containers needed to transport the goods, leading to a significant reduction in transport emissions.

In addition, our fragrances are now suitable for locations with a vegan or vegetarian ethos; the manufacture and development of our fragrances does not involve the use of any animal product, by-product, or derivative, and does not involve testing on animals.

Recycling: Wasting no time

We have brought our recycling operation in-house – any product that cannot be reused or refurbished is passed to our Coleshill recycling centre to be broken down, with the components being put individually into various waste and recycling streams for collection.

Fully serviced

The **AIRSCENT XTRA** is a fully managed solution, freeing time for your staff to concentrate on other duties. The easy to read LCD display gives a clear overview of the units status.
